## Swimming Pool & Spa Water Sample Collector

The Lewsolve Swimming Pool & Spa Water Sampler is designed for collecting swimming pool & spa water samples for analysis.

The most important factor when taking a water sample from a swimming pool or spa is to ensure the sample is taken from at least 300 mm depth and not from the surface or any areas near a skimmer or return jets.

The Lewsolve sampler allows the user to collect water samples from this optimum area without bending or laying on the ground to retrieve the water sample.

Benefits include more accurate pool readings, better water chemistry control, improved water condition and improved posture when collecting sample.

#### Features include

- ◆ Tapered neck collector vessel for controlled water collection
- ◆ Water collector quick release holder
- ◆ Adjustable handle length for swimming pool or spa use
- ◆ Non slip handle grip with lanyard
- ◆ Screw cap spout adaptor for easy sample transfer
- ◆ Screw cap for collector for offsite analysis

This low cost unit is suitable for commercial and domestic use

Testing using a digital test strip reader

Testing using supplied screw cap spout adaptor and liquid or tablet reagents

Testing using test strips or offsite testing using supplied screw cap
